Speaker Cable

響音

Hibiki

Hibiki is applied development products of the silk covering wire that was originally used for the internal wiring at Maxonic's speaker system.

Covering of core copper wire is silk and cotton thread, outer covering is plant dyeing cotton. To eliminate the electrostatic effect caused by pigment including metals, synthetic resin not used at all.

It do not used high-purity copper to reduction of loss by skin effect, and plugs to reduce the contact structure as much as possible.

High sensitivity performance obtained by them is brought the musical original emotion.
